the purpose of the test is to measure the capacity of a chemical to activate or inhibit the transcription of a genetic construct *thb zip gfp x laevis eleutheroembryos* either by binding to the thyroid hormone receptor or by modifying the amount of thyroid hormone available for transcription the test is based on the use of a transgenic frog possessing the genetic construction *thb zip gfp* of the species *x laevis gfp* is a fluorescent protein that can be used to affirm the presence of the substance and to follow its action this test is based on the quantification of fluorescence and thus of the *gfp* protein throughout the *eleutheroembryo* exposed to a test chemical indeed if the fluorescence is 12 by including the highest concentration of the test the test is considered positive organisms are exposed in chemically inert cell culture plates 6 wells each well contains ten organisms in solution in a run 20 organisms are exposed to each test concentration tadpoles are exposed to the test chemical at *nf stage 45* for a duration of 72 hours a positive result of the *xeta* test indicates in vivo that a substance induces damage to the receptor and metabolization of the thyroid hormone a negative result indicates that under test conditions the test substance does not induce detectable damage to the thyroid and its functioning

pooling designs have been widely used in various aspects of *dna* sequencing in biological applications the well studied mathematical problem called group testing shifts its focus to nonadaptive algorithms while the focus of traditional group testing is on sequential algorithms biological applications also bring forth new models not previously considered such as the error tolerant model the complex model and the inhibitor model this book is the first attempt to collect all the significant research on pooling designs in one convenient place the coverage includes many real biological applications such as clone library screening contig sequencing exon boundary finding and protein protein interaction detecting and introduces the mathematics behind it

competitive examination preparation takes enormous efforts time on the part of a student to learn practice and master each unit of the syllabus to check proficiency level in each unit student must take self assessment to identify his her weak areas to work upon that

eventually builds confidence to win also performance of a student in exam improves significantly if student is familiar with the exact nature type and difficulty level of the questions being asked in the exam with this objective in mind we are presenting before you this book containing unit tests some features of the books are the complete syllabus is divided into logical units and there is a self assessment tests for each unit tests are prepared by subject experts who have decade of experience to prepare students for competitive exams tests are as per the latest pattern of the examination detailed explanatory solution of each test paper is also given student is advised to attempt these tests once they complete the preparation revision of unit they should attempt these test in exam like environment in a specified time student is advised to properly analyze the solutions and think of alternative methods and linkage to the solutions of identical problems also we firmly believe that the book in this form will definitely help a genuine hardworking student we have put our best efforts to make this book error free still there may be some errors we would appreciate if the same is brought to our notice we wish to utilize the opportunity to place on record our special thanks to all faculty members and editorial team for their efforts to make this book

the awareness and development of biodegradable surfactants pre dates current pressures by the environmental movement by nearly three decades wherein a responsible industry mutually agreed to replace hard non biodegradable components of household detergents by soft biodegradable alternatives without course to legislation the only requirement at that time was for surfactants used in detergents to exhibit a primary biodegradability in excess of 80 this referring to the disappearance or removal from solution of the intact surface active material as detected by specified analytical techniques this proved useful as observed environmental impacts of surfactants e.g visible foam on rivers are associated with the intact molecule test methods for primary biodegradability were eventually enshrined in eu legislation for nonionic surfactants directive 821242 eec amended 73 404ieec and for anionic surfactants directive 8212431eec amended 73 405ieec no approved test methods and resultant legislation have been developed for cationic and amphoteric surfactants to date the environmental classification of chemical substances which of course includes surfactants and associated risk assessment utilises a second criterion ready biodegradability this may be assessed by a number of methods which monitor oxygen uptake bod carbon dioxide production or removal of dissolved organic carbon doc some surfactants which comply with the above detergents directive are borderline when it comes to ready biodegradability
