this is the first publication to collect standardize and recommend a scientifically rigorous set of field protocols for monitoring and assessing salmon and trout populations includes five additional techniques that can be used with any of the 13 principle methods to supplement information gathered over four dozen fisheries experts throughout the u s pacific northwest and beyond contributed their time to pick write and review the most reliable protocols for enumerating salmonids in the field presented in an easy to use format each of the 18 peer reviewed protocols covers objectives sample design data handling personnel and operational requirements and field and office techniques including survey forms standardized monitoring protocols will improve data reliability maximize opportunities for data sharing and data set comparability and ultimately improve the ability to assess status and trends the handbook will also support consistency in data collection for salmonids at the international level

the 1988 fisheries bioengineering symposium held in portland oregon usa was based on a theme of problems and solutions in developed river systems the emphasis was upon developed river systems both because development is more the norm than nondevelopment and because the seemingly worst problems hence the biggest challenges for fish in rivers result from

development further one can reasonably predict that development will continue so unless adequate solutions are found river based fisheries will experience progressively greater problems most of the symposium was devoted to solutions in two main and widely divergent topics habitat improvement and restoration and mitigation via hatcheries although these topics may seem strange bedfellows they define the main alternatives available to fishery managers for correcting or mitigating fishery losses in developed rivers and they are the professional concerns of bioengineering in this regard it was a primary goal of the steering committee to bring together and facilitate information exchange between biologist and engineers so that each group could gain a better appreciation for the other s perspectives constraints and strengths
